HelpMe Usage

History   Source

Using HelpMe

Admin

- When the user issues the help command, they are placed into a wait queue. A scoreboard will appear on anyone with admin or helper permissions, telling them how many users are waiting to be helped
- When the admin issues the command /helpme and someone is in the wait queue, they will be automatically teleported to their location and a message telling them who they're helping. When they're done, they can simply go on their way or if there are more users in the queue, they can issue /helpme again to continue to the next user

User

- If a user ever needs help, they can request help from admins (or users with pst.helper permission: Permissions). Admins can then issue a command to be teleported to the next user in the queue who needs assistance
